Regional Workshop On Water Scarcity

Overview

Water scarcity is a constantly growing problem worldwide, not only in arid and semiarid regions. United Nations define Water Scarcity as: the point at which the aggregate impact of all users impinges on the supply or quality of water under prevailing institutional arrangements to the extent that the demand by all sectors, including the environment, cannot be satisfied fully. In addition, water scarcity is constantly aggravated by factors such as climate change, population growth, economic development and devastation of natural resources.

This Regional Workshop aims to bring together experts from different fields to exchange and share their experiences and research results about aspects of Water Scarcity, and discuss the practical challenges encountered and the solutions adopted.

Aims and Scopes

The main objective are: to share experience and research from expert partners, discuss main problems in the field of water management in different regions and to build networks between experts and scientist.

Topics

- Analysis of drought in Arid and Semiarid regions.
- Natural sources of water in different regions: Glaciers, Ground Water and Lakes.
- Water resources management.
- Water management infrastructures: dams, dikes and reservoirs.

Target Audience

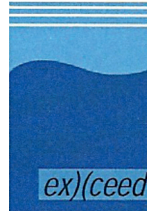

Researchers, Professors, Postgraduate and students dedicated to topics related to sustainable water management.
